

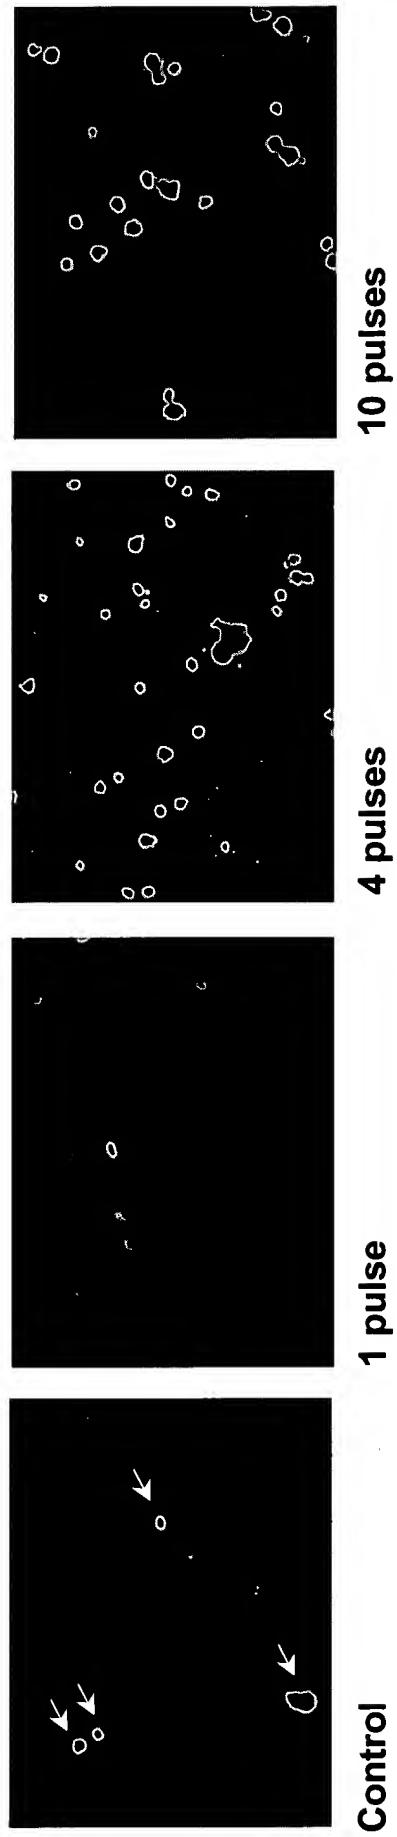

## Fig. 1 Propidium Iodide Uptake by WSI Human Foreskin Fibroblasts During Electroporation

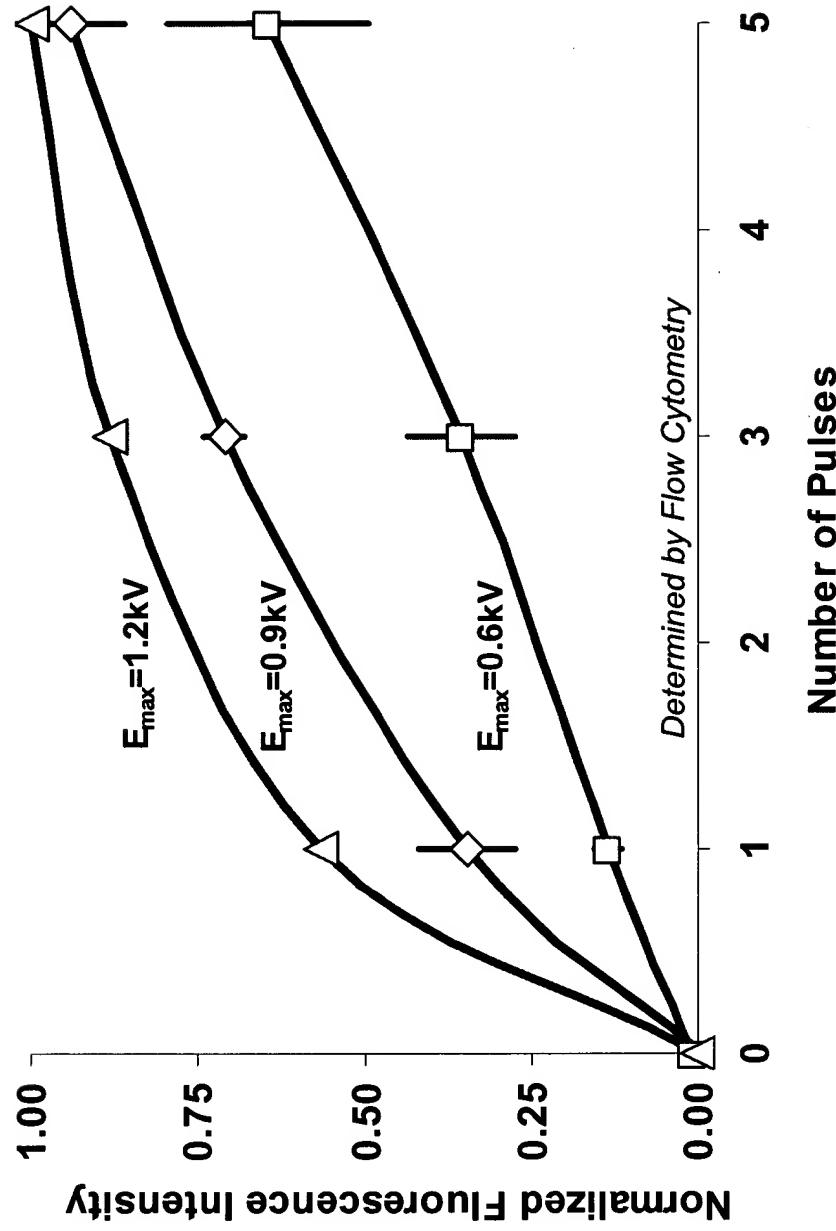

Propidium iodide: Membrane impermeable, DNA binding fluorescent agent.  
Molecular weight is comparable to trehalose.

## Fig. 2 Propidium Iodide Uptake by WSI Human Foreskin Fibroblasts During Electroporation

Electroporation Buffer: 1xPBS + 20 $\mu$ g/mL Propidium Iodide

**Fig. 3 Long Term Viability after Electroporation**
